Microsoft Test4Prep 70-243

Test4Prep

Exam A

QUESTION 1
You recently migrated from System Center Configuration Manager 2007 to System Center 2012 Configuration Manager. Your network contains a client computer that runs the 64-bit version of Windows 7 and the 32-brt version of Widows 7. Some client computers have the Microsoft Application Virtualization (App-V) client installed. You have an Application named App1. You have a 64-bit version of App1, a 32-bit version of App1, and a virtual version of App1. You need to deploy the Application to all of the client computers. The solution must minimize the amount of administrative effort. What should you do?

A. Create a new Application that has three different deployment types and create a target collection for each of the deployment types.
B. Create a new Application that has three different deployment types and configure global conditions for each of the deployment types.
C. Create a new package for each version of App1.
D. Create a new Application for each version of App1.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 2
You have an Application named App1. You need to ensure that users in the finance department can install App1 by using the Application Catalog. What should you do?

A. Create a required user deployment and target the deployment to all of the finance department users.
B. Create a required user deployment and target the deployment to all of the client computers in the finance department.
C. Create an available user deployment and target the deployment to all of the finance department users.
D. Create an available user deployment and target the deployment to all of the client computers in the finance department.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 3
Your company uses System Center 2012 Configuration Manager with Microsoft Forefront Endpoint Protection integration. You deploy Forefront Endpoint Protection to all client computers. The company uses a management Application named App1. You discover that Forefront Endpoint Protection blocks App1. You need to ensure that App1 can run. How should you configure the Default Client Malware Policy? (Each correct answer presents a complete solution. Choose two.)

A. Create a software restriction policy.
B. Add a process exclusion.
C. Add a file location exclusion.
D. Modify the schedule scan settings.
E. Click the Use behavior monitoring check box.

Correct Answer: CE
Section: (none)
Explanation

Explanation/Reference:

QUESTION 4
Your network contains a System Center 2012 Configuration Manager environment. You deploy a Microsoft Office 2007 package to all client computers by using Configuration Manager. Your company purchases Office 2010. You need to ensure that all users can install Office 2010 from the Application Catalog. What should you do?

A. Deploy a new package for Office 2010.
B. Deploy Office 2010 by using a Group Policy Object (GPO).
C. Update the Office 2007 source file and redeploy the package.
D. Deploy a new Application for Office 2010.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 5
You deploy Windows 7 by using Operating System Deployment (OSD). The development task sequence contains steps to install software updates and Applications. The amount of time required to deploy the Windows 7 image has increased significantly during the last six months. You need to recommend a solution to reduce the amount of time it takes to deploy the image. What should you recommend?

A. Synchronize software updates before deploying the image.
B. Use offline servicing for the image.
C. Create a new automatic deployment rule.
D. Add an additional Install Software Updates step to the deployment task sequence.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 6
You have Windows 7 .mages that are rebuilt quarterly and sported to System Center 2012 Configuration Manager. The Microsoft Deployment Toolkit (MDT) 2012 is integrated with Configuration Manager. You need to reduce the network security risks when the images are deployed by using Operating System Deployment (OSD). What should you do? (Choose all that App1y.)

A. After the App1y Operating System Image task sequence step, add a step to install software updates offline.
B. Before the App1y Operating System image task sequence step, add a step to install Deployment Imaging Servicing and Management (DISM).
C. After the installation of the final Application, add an Install Software Updates task sequence step.
D. After the App1y Operating System Image task sequence step, add a Run Command line step that runs wuaudt.exe /detectnow
E. Before the App1y Operating System image task sequence step, add a step to install the Windows Automated Installation Kit (Windows AIK).

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:

QUESTION 7
Your company uses System Center 2012 Configuration Manager to distribute operating system images. The standard operating system for client computers is Windows 7 Enterprise (x86). You receive 300 new desktop computers. Each computer has a new storage controller. When you attempt to deploy an existing image to one of the computers, you receive an error message indicating that a storage device cannot be found during the pre-boot deployment phase. You need to ensure that you can deploy Windows 7 to the new computers by using an image. What should you do?

A. Import the storage drivers to the Drivers container and update the task sequence.
B. Create a new x64 boot image and configure the operating system image to use the x64 boot image.
C. Create a new driver package and update the task sequence.
D. Update the existing x86 boot image to include the storage drivers.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 8
Your network contains a System Center 2012 Configuration Manager environment. You plan to create a build and capture a task sequence to build a reference image of Windows 7. You need to identify which Application must exist in Configuration Manager before you can create the build and capture the task sequence. Which Applications should you identify? (Choose all that App1y.)

A. Microsoft Deployment Toolkit (MDT)
B. Configuration Manager client
C. System Preparation tool (Sysprep)
D. User State Migration Tool (USMT)

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 9
You are the network administrator for a company named Contoso, Ltd. The network contains 1,000 desktop computers and 500 servers. The network contains a System Center 2012 Configuration Manager environment. The names of all the desktop computers in the human resources department start with the letters HR, for example HR001 and HR023. A device collection named All Server Devices contains all of the servers. A device collection named All Desktop Devices contains all of the desktop computers. You plan to create a new collection named All HR Computers and Servers. The new collection must contain all of the human resources department computers and all of the servers. The collection must not contain any other computers. You need to create a membership rule for the new collection. Which rule should you include in the membership rule? (Choose all that App1y.)

A. QUERY RULE: select * from SMS_R_System where SMS_R_system.NetbiosName like "HR%"
B. INCLUDE RULE: All Server Devices
C. EXCLUDE RULE: All NON HR Computers

D. EXCLUDE RULE: All Desktop Devices

E. QUERY RULE- select * from SMS_R_System where
   SMS_R_system.OperatingSystemNameandVersion like. *%Workstation*

F. QUERY RULE- select * from SMS_R_System where
   SMS_R_system.OperatingSystemNameandVersion not like. *%Server*

Correct Answer: CE
Section: (none)
Explanation

Explanation/Reference:

QUESTION 10
Your network contains a System Center 2012 Configuration Manager environment. Three users named
User1, User2, and User3 will perform the following tasks:
· User1 will review software metering data and inventory reports.
· User2 will deploy Applications and create alerts.
· User3 will create configuration items.
You need to identify which security role must be assigned to which user. What should you identify? To
answer, drag the appropriate security role to the correct user in the answer area. Each security role may be
used once, more than once, at all. Additionally, you may need to drag the split bar between panes or scroll
to view content.
(See exhibit)

Exhibit:

A.
B.
C.
D.

Correct Answer:
Section: (none)
Explanation

Explanation/Reference:

Security Role	Answer Area
Application Deployment Manager	User1 Asset Manager
Asset Manager	User Compliance Settings Manager
Compliance Settings Manager	User3 Application Deployment Manager
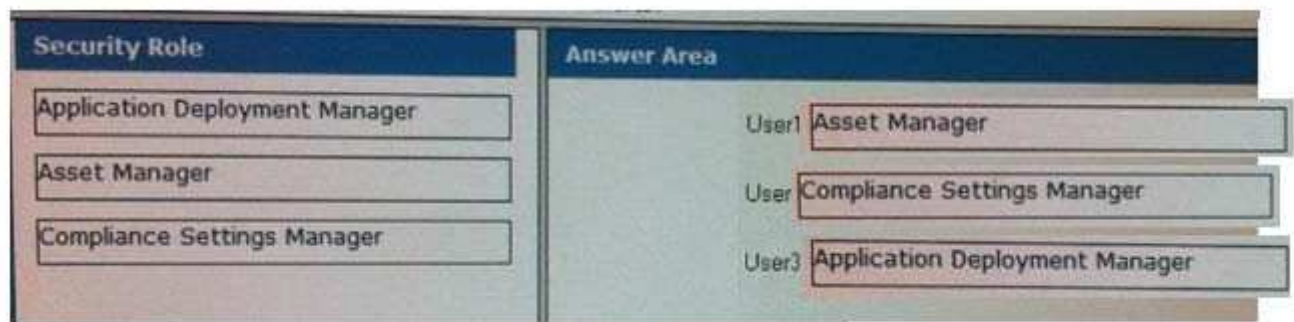

QUESTION 11
Your network contains a System Center 2012 Configuration Manager environment. The Client Status node .n the Configuration Manager console shows a downward trend n client health. You verify the logs on several clients. You discover that the clients are healthy and are communicating normally to management points. You need to identify the reasons why the Configuration Manager console displays a downward trend in client health. Which reasons should you identify? (Choose all that App1y.)

A. In Client Status Settings Properties, the Heartbeat discovery during the following days interval is shorter than the Heartbeat Discovery interval.
B. The age set in the Delete Aged Discovery Data maintenance task is shorter than the Heartbeat Discovery interval.
C. The Delete Obsolete Client Discovery Data maintenance task is disabled.
D. The Active Directory sites that are members of boundary groups are modified.
E. Microsoft SQL Server replication to the management points stopped.

Correct Answer: DE
Section: (none)
Explanation

Explanation/Reference:

QUESTION 12
Your network contains a System Center 2012 Configuration Manager environment. The hierarchy contains a Central Administration at Site1 and a primary site named Site. You discover that none of the packages created on Site1 are displayed in Site2. You need to identify whether there is a replication issue between the sites. What should you review?

A. the Inventoryagent.log file
B. the Rcmctrl.log file
C. the Microsoft SQL Server replication diagnostic files
D. the Despool.log file

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 13
Your network contains two Active Directory forests named contoso.com and litwareinc.com. You implement System Center 2012 Configuration Manager in the contoso.com forest. You deploy the Configuration Manager client to alt of the client computers in contoso.com by using a logon script. You need to ensure that the Configuration Manager client is automatically deployed to all of the client computers m me litwareinc.com forest. What should you do? (Choose all that App1y.)

A. Configure a Client Push Installation account.
B. Enable Client Push installation.
C. Enable Active Directory System Discovery.
D. Configure an administrative user.
E. Enable Active Directory Forest Discovery.

Correct Answer: AD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 14
Your network contains a System Center 2012 Configuration Manager environment. The environment contains a angle primary site. You need to provide users with the ability to remotely reset their mobile device to the factory settings. What should you install?

A. Application Catalog web service point and Application Catalog website point
B. out of band service point and Application Catalog web service point
C. device management point and System Health validator point
D. System Health Validator point and Application Catalog website point

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 15
Your network contains a Windows Server Update Services (WSUS) server. All client computers are configured as WSUS clients. All of the client computers have Windows Firewall enabled. Windows Firewall is configured to block Fie and Printer Sharing. Users are not configured as local Administrators on their client computers. You deploy System Center 2012 Configuration Manager. You need to identify which methods you can use to deploy the Configuration Manager client to an of the client computers. Which client installation methods should you identify? (Choose all that App1y.)

A. a logon script installation
B. a manual client installation
C. a software update-based client installation
D. a Client Push Installation
E. an Active Directory Group Policy-based installation

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
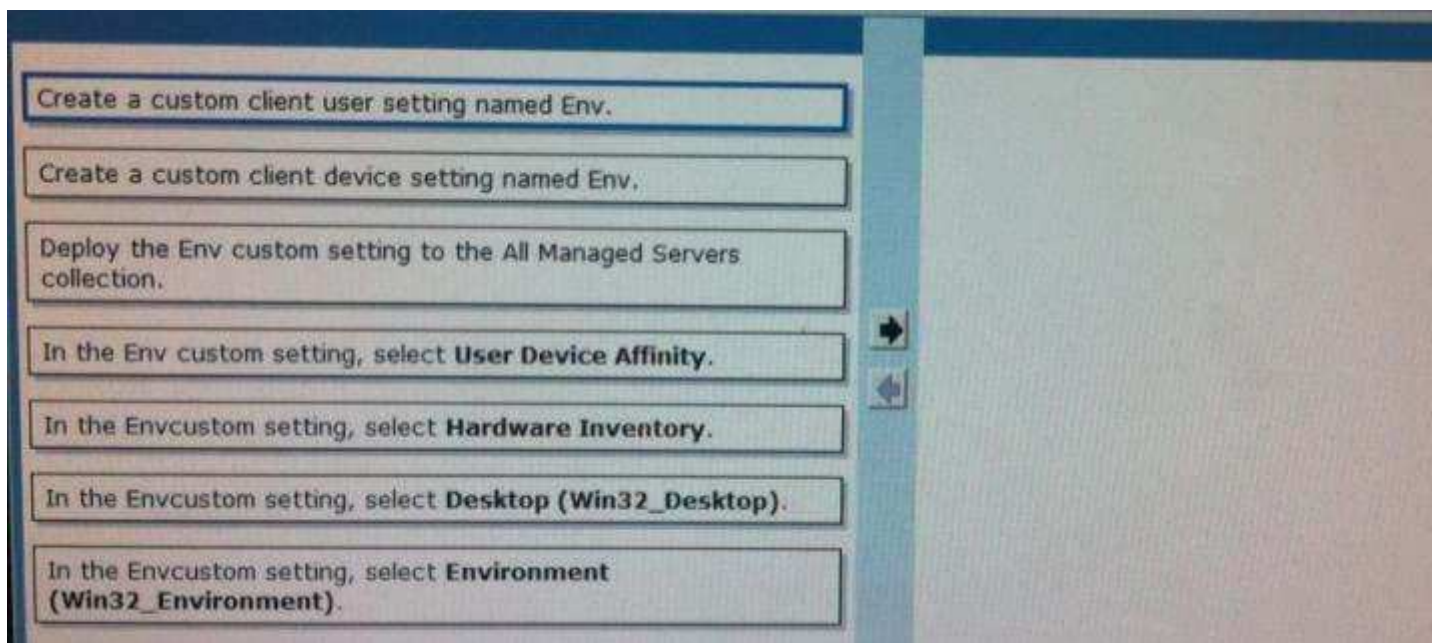

QUESTION 16
Your network contains a System Center 2012 Configuration Manager environment. You create a collection named All Managed Servers. You need to inventory the environment variables of the AH Managed Servers collection. What should you do?
To answer, move the four appropriate actions from the list of actions to the answer area and arrange.
(See exhibit)

Exhibit:

Create a custom client user setting named Env.

Create a custom client device setting named Env.

Deploy the Env custom setting to the All Managed Servers collection.

In the Env custom setting, select **User Device Affinity**.

In the Envcustom setting, select **Hardware Inventory**.

In the Envcustom setting, select **Desktop (Win32_Desktop)**.

In the Envcustom setting, select **Environment (Win32_Environment)**.

A.
B.
C.
D.

Correct Answer:
Section: (none)
Explanation

Explanation/Reference:

QUESTION 17
Your network contains a single Active Directory domain. The functional level of the domain is windows 2003. The domain contains the following server:
· Ten servers that run Windows Server 2003
· Twenty servers that run Windows Server 2008
· One server that has Microsoft Exchange Server 2007 installed · One server that has System Center 2012 Configuration Manager installed Users have mobile devices that run Windows Mobile 6.5 and Windows Phone. You need to ensure that you can manage the settings of the mobile devices and perform remote device wipes by using Configuration Manager. What should you do?

A. Upgrade the Exchange server to Exchange Server 2010. Configure an Exchange connector.
B. Change the functional level of the domain to windows 2008. Upgrade the Exchange server to Exchange Server 2010.
C. Upgrade all Windows 2003 domain controllers to Windows 2008.
D. Upgrade all of the domain controllers to Windows 2008 R2. Configure an Exchange connector.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 18
Your network contains a System Center 2012 Configuration Manager environment. You need to change the organization name displayed by Configuration Manager. Which settings should you modify from the Configuration Manager console?

A. Client Policy
B. Computer Agent
C. User and Device Affinity
D. Compliance Settings

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 19
Your network contains a System Center 2012 Configuration Manager environment. Software Inventory and Hardware Inventory are enabled for all of the client computers. All of the client computers have an Application named App1 installed. App1 saves files to the C:\ABC folder. Al of the files saved by App1 have a file name extension of .abc. You configure Software Inventory to inventory all of the files that have the .abc extension and the .exe extension. After six months, you discover that some of the client computers fad to inventory .abc fees. Al of the client computers inventory .exe files. You need to ensure that the .abc files are inventoried. What should you do?

A. Modify C:\Program Files\App1\NO_SMS_On_Drive.sms.
B. Delete C:\Program Files\App1\NO-SMS_On_Drive.sms.
C. Modify C:\ABC\Skpswi.dat.
D. Delete C:\ABC\Skpswi.dat.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 20
Your network contains a System Center 2012 Configuration Manager environment. In Default Client Agent Settings, you enable Hardware Inventory and Software Inventory. You discover that a group of client computers fails to report software inventory data. The client computers report hardware inventory data. You confirm that Configuration Manager can deploy Applications to the group of client computers. You need to identify what is causing the reporting issue. Which log files should you review? (Choose all that App1y.)

A. Filesystemfile.log

B. Dataldr.log

C. Mp_sinv.log

D. Inventoryagent.log

E. Hman.log

Correct Answer: AD
Section: (none)

Explanation/Reference:

QUESTION 21
Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series. Your network contains a System Center 2012 Configuration Manager environment. The network contains 10 database servers that run Microsoft SQL Server 2008. You have a configuration baseline that is used to monitor the database servers. You add new configuration items to the configuration baseline. Two days later, you discover that only eight of the database servers report any information about the new configuration items. You need to identify whether the new configuration items downloaded to the database servers. Which log file should you review?

A. Hman.log

B. Sitestat.log

C. Dcmagent.log

D. Wsyncmgr.log

E. Ccm.log

F. Contenttransfermanager.log

G. Sdmagent.log

H. Rcmctri.log

I. Ciagent.log

J. Smsexec.log

K. Locationservices.log

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 22
Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series. You create a deployment to install Microsoft Office 2010. The deployment targets 5,000 client computers on the network. Two weeks after you create the deployment, you discover that Office 2010 fails to install on a client computer named Computer 1. You need to identify whether Computer1 started downloading the Application of Office 2010. Which log file should you review?

A. Locationservices.log

B. Ccm.log

C. Sdmagent.log

D. Sitestat.log

E. Rcmctrl.log

F. Dcmagent.log

G. Contenttransfermanager.log

H. Smsexec.log

I. Wsyncmgr.log

J. Ciagent.log

QUESTION 24
Your network contains an Active Directory forest named litwareinc.com. The forest has a single domain. The forest contains a System Center 2012 Configuration Manager environment. The environment contains a angle primary site. You create a group named InstallTechs. You need to ensure that the members of InstallTechs can deploy Applications to desktop computers by using Configuration Manager. The solution must minimize the number of permissions assigned to InstallTechs. What should you do?

A. Assign the Application Administrator security role to InstallTechs. Create a new collection that contains all of the desktop computers. Scope InstallTechs to the new collection.
B. Assign the Application Deployment Manager security role to InstallTechs. Create a new collection that contains all of the desktop computers. Scope InstallTechs to the new collection.
C. Add the Application Deployment Manager security role to InstallTechs. Create a new collection that contains computers. Add InstallTechs to the local Administrators group on each desktop computer.
D. Assign the Application Administrator secunty role to Installs. Create a new collection that contains all of the desktop computers. Add InstallTechs to the local Administrators group on each desktop computer.

Correct Answer: C
Section: (none)
Explanation

QUESTION 25

Your network contains a single Active Directory domain. You plan to deploy System Center 2012 Configuration Manager. The hierarchy will have a Central Administration site and five primary sites. You need to ensure that you can target user groups for software distribution. The solution must minimize network traffic. Which Configuration Manager discovery method should you use?

A. Active Directory User Discovery on the primary sites
B. Active Directory User Discovery on the primary sites and Active Directory Group Discovery on every site
C. Active Directory User Discovery on the Central Administration site and Active Directory Group Discovery on the primary sites
D. Active Directory User Discovery and Active Directory Group Discovery on the Central Administration site

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 26
Your network contains a System Center 2012 Configuration Manager environment. The Configuration Manager databases are located on a remote server that runs Microsoft SQL Server. You need to ensure that you can restore the Central Administration site. What should you do?

A. From the Configuration Manager console, enable the Backup Site Server maintenance task and set a schedule.
B. From Microsoft SQL Server Management Studio, create a maintenance plan for the site databases.
C. From Task Scheduler, create a scheduled task that runs smssqlbkup.exe.
D. From Windows Server Backup, schedule a full system backup.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 27
Your network contains a single Active Directory forest named contoso.com. Contoso.com contains three System Center 2012 Configuration Manager sites and one System Center Configuration Manager 2007 site. You need to ensure that you can transfer objects from Configuration Manager 2007 to Configuration Manager 2012. What should you do?

A. Assign the computer account of the Central Administration site server permission to the Configuration Manager 2007 site. Assign the computer account of the Central Administration site server permissions to the Microsoft SQL Server database instance.
B. Extend the Active Directory schema and assign the Central Administration site server permissions to the System\System Management container.
C. Connect the Configuration Manager 2007 primary site as a child primary site of the Configuration Manager 2012 primary site.
D. Connect the Configuration Manager 2012 primary site as a child primary site of the Configuration Manager 2007 primary site.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 28
Your network contains a System Center 2012 Configuration Manage environment. The environment

contains a primary site server named Server1 and a server named Server2 that runs Microsoft SQL Server 2008 R2. Server2 contains the Configuration Manager database. Server2 fails. You install SQL Server 2008 R2 on a new server. You name the server Server3. You need to restore the Configuration Manager database to Server3. What should you do?

A. Register the Service Principal Name (SPN) for the SQL Server service account of Server3. From Server1, run the Configuration Manager 2012 Setup Wizard.
B. From Server3, run Microsoft SQL Server Management Studio, and then restore the backed up SQL Server database and log files.
C. From Server3, run Microsoft SQL Server Management Studio, and then attach the backed up SQL Server database and log files.
D. Register the Service Principal Name (SPN) for the SQL Server service account of Server3. From Server1, run the Site Repair Wizard.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 29
Your network contains a System Center 2012 Configuration Manager environment. The environment contains a single primary site. The primary site has a distribution point and a management point. You need to recommend a commutation solution that meets the following requirements:
· Communication between the client computes in the research department and the management point must use MTTPS.
· Communication between all of the other client computes and the management point must be able to use HTTP.
· Minimize the number of site system.
What should you do?

A. Configure the existing management point to use MTTPS. Configure the research department computers always to um MTTPS.
B. Create a now primary child site and configure the site to use native mode. Assign all of the research department computers to the new site.
C. Install a new management point and configure the management point always to use MTTPS. Configure the research department computers always to use MTTPS.
D. Install a new management point and configure Windows Firewall to block abound TCP port 80. Configure the research department computes always to use MTTPS.

Correct Answer: A

QUESTION 30
Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series. Your network contains a System Center 2012 Configuration Manager environment. Your company deploys 1,000 client computers. You discover that information about printers fails to appear in any inventory queries or reports. Information about other hardware devices appears in the inventory queries and reports. You need to ensure that Configuration Manager data includes information about the printers. What should you do?

A. Add a WMI class to the Hardware inventory Classes list.
B. Enable a default WMI class in the Hardware Inventory Classes list.
C. Add a file name to the Software Inventory configuration.
D. Add a file name to the Hardware inventory configuration.
E. Add a file name to Software Metering.

F. Select Collect NOIDMIF files in Hardware Inventory.
G. Add a WMI class to the Sms_def.mof file.
H. Modify the Enable software inventory on clients setting.
I. Modify the Enable hardware inventory on clients setting.

Correct Answer: C
Section: (none)

QUESTION 34
Your network contains a System Center 2012 Configuration Manager environment. You need to create a report that lists all of the client computers that do not have an Application named App1 instated. Which query should you use to create the report?

A. SELECT SYS.Netbios_Name0, ARP.DisplayName0
   FROM v_R_System AS SYS INNER JOIN
   v_GS_ADD_REMOVE_PROGRAMS AS ARP ON SYS.ResourceID = ARP. ResourceID WHERE
   ARP.DisplayName0 NOT IN ('App1')
B. SELECT SYS.Netbios_Name0 from v_R_System SYS
   WHERE SYS.ResourceID IN
   (SELECT SYS.ResourceID
   FROM v_R_System AS SYS INNER JOIN
   v_GS_ADD_REMOVE_PROGRAMS AS ARP ON SYS.ResourceID - ARP.ResourceID. WHERE
   ARP.DisplayName0 = 'App1')
C. SELECT SYS.Netbios_Name0 from v_R_System SYS
   WHERE SYS.ResourceID NOT IN
   (SELECT SYS.ResourceID
   FROM v_R_System AS SYS INNER JOIN
   v_GS_ADD_REMOVE_PROGRAMS AS ARP ON SYS.ResourceID = ARP.ResourceID WHERE
   ARP.DisplayName0 = 'App1')
D. SELECT SYS.Netbios_Name0, ARP.DisplayName0
   FROM v_R_System AS SYS INNER JOIN
   V_GS_ADD_REMOVE_PROGRAMS AS ARP ON SYS.ResourceID - ARP.ResourceID WHERE
   ARP.DisplayName0 NOT LIKE 'App1'

Explanation

QUESTION 38
Your network contains a System center 2012 Configuration Manager environment. The environment contains a reporting services point. A group of users is responsible for creating custom reports. The custom reports will be published. You need to identify which tools can be used to create and publish custom reports to Microsoft SQL Server Reporting Services (SSRS). Which tools should you identify? (Choose all that apply.)

A. Report Builder
B. Microsoft SQL Server Business Intelligence Development Studio
C. Microsoft Access 2010
D. Reporting Services Configuration Manager
E. Microsoft SQL Server Management Studio

Correct Answer: DE
Section: (none)

QUESTION 39
Your network contains a System Center 2012 Configuration Manager environment. You create a report named Report1. Report1 is used by multiple users. Users report that it takes too long to load Report1. You need to reduce the amount of time it takes to load Report1. What should you do?

A. Enable caching for the report.
B. Decrease the Size of the ReportServer database.
C. Decrease the session timeout value for the Reports website.
D. Increase the size of the ReportServerTempDB database.

Correct Answer: C
Section: (none)

QUESTION 40
Your network contains a System center 2012 Configuration Manager environment. You are creating a configuration item that contains application settings for Microsoft Office 2010. You need to detect whether Office 2010 is installed before validating the configuration item. What should you do?

A. Create a query-based collection.
B. Create an automatic deployment rule.
C. Create a report to display all installed software.
D. Enable Use Windows Installer detection.

Correct Answer: A
Section: (none)

QUESTION 41
Your network contains a System Center 2012 Configuration Manager environment. Two weeks ago, you

deployed a Windows Installer package named App1. You need to remediate a registry value that applies only to the client computers that have App1 installed. The solution must minimize network traffic. What should you do?

A. Modify the App1 Windows Installer package to contain the registry setting, and then create a new application for Appl.
B. Modify the App1 Windows Installer package to contain the registry setting, and then configure the existing application for App1 to use the new Windows Installer package.
C. Create an application-based configuration item, configure a rule for an existential type, and then import the registry setting from a client computer that has App1 installed,
D. Create an application-based configuration item, configure the detection method to use the Windows Installer product code of App1, and then import the registry setting from a client computer that has App1 installed.

Correct Answer: C
Section: (none)

QUESTION 42
Your company uses System Center 2012 Configuration Manager to monitor compliance. The company has a configuration basel.ne for each server that has the Web Server (IIS) server rote installed. A new corporate policy specifies that the maximum TCP window size for all of the Web servers must be 131,072 bytes. You discover that the TCP window size is set in the following registry entry:
HKEY_LOCAL_ MACHINE\System\CurrentControlSet\Services\HTTP\Parameters\MaxBytesPerSend You need to generate an error message for all of the Web servers that do NOT comply with the corporate policy. What should you do?

A. Add a new configuration item that has a registry value setting type to the configuration baseline.
B. Create a query-based collection that contains all of the Web servers, and then initiate an inventory collection.
C. Create a query that returns a list of all the Web servers, and then search the query results for the registry value.
D. Add a new configuration item that has an Internet Information Serv.ces (IIS) metabase setting type to the configuration basel.ne.

Correct Answer: A

QUESTION 43
Your company has a products network and a test network. Both networks have System Center 2012 Configuration Manager deployed. You create the following objects on the test network:
· A configuration item named SQLServerCI
· A configuration baseline named SQLServerBaseline that contains the configuration item · A collection named SQLServers that contains all of the servers on the test network that run Microsoft SQL Server. You export the configuration baseline to SQLServerBaseline.cab. You open the Configuration Manager console, you click Assets and Compliance, and then you expand Compliance Settings. You need to apply the configuration baseline to the servers on the production network that run SQL Server. You create a collection named SQLServers that contains all SQL Servers from the production network. What should you do next? (Choose all that apply.)

A. Right-click SQLServersBaseline, select Categorize, and then select Server.
B. Right-click SQLServerCI, select Export, and then specify SQLServer Baseline.cab as the export file.
C. Right-click SQLServersBaseline, select Deploy, and then select the SQLServers collection.
D. Right-click ConfigurationBaselines, and then select Import Configuration Data

E. Right-click SQLServersBaseline, and then select Properties. In the Deployments tab, type SQLServers in the Filter... box.

Correct Answer: AC

QUESTION 44
Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series. Your network contains a System Center 2012 Configuration Manager environment as shown in the exhibit. (Click the Exhibit button.) The network contains six servers. The servers are configured as shown in the following table.

Server name	Server configuration
Server1	• File server • DNS server • Domain controller
Server2	• Microsoft SQL Server • Configuration Managersite database • Microsoft SQL Server Reporting Services (SSRS)
Server3	• Distribution point • Managementpoint • Internet Information Services (IIS) • Configuration Managerprimary site server
Server4	• File server • Microsoft Exchange Server 2010 • Windows Deployment Services (WDS)
Server5	• Internet Information Services (IIS) • Windows Deployment Services (WDS)
Server6	• Enrollment point • Internet Information Services (IIS)

You plan to deploy servers to the perimeter network by using Configuration Manager. The operating system for each server will be instated over the network. The installations will begin automatically, as soon as each server starts for the first time. You need to recommend a solution to minimize the amount of network traffic between the perimeter network and the internal network during the installation of the operating systems. What should you do?

A. Install a software update point on Server3.
B. Configure IIS to support only HTTP on Server3.
C. Install a PXE-enabled protected distribution point on Servers.
D. Install a management point on Servers.
E. Install Windows Server Update Services (WSUS) on Server3.
F. Install Network Load Balancing (NLB) on Server6.
G. Install the Windows Cluster service on Server6.
H. Install a PXE-enabled protected distribution point on Server4.
I. Install a management point on Server2.
J. Install a protected distribution point on Server1.

K. Install the Windows Cluster service on Server3.
L. Install Network Load Balancing (NLB) on Server3.
M. Configure the Exchange connector on Server3.
N. Configure IIS to support only HTTPS on Servers.
O. Install an enrollment proxy point on Server6.

Correct Answer: C

QUESTION 45
Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series. Your network contains a System Center 2012 Configuration Manager environment as shown in the exhibit. (Click the Exhibit button.) The network contains six servers. The servers are configured as shown in the following table.

Server name	Server configuration
Server1	• File server • DNS server • Domain controller
Server2	• Microsoft SQL Server • Configuration Managersite database • Microsoft SQL Server Reporting Services (SSRS)
Server3	• Distribution point • Managementpoint • Internet Information Services (IIS) • Configuration Managerprimary site server
Server4	• File server • Microsoft Exchange Server 2010 • Windows Deployment Services (WDS)
Server5	• Internet Information Services (IIS) • Windows Deployment Services (WDS)
Server6	• Enrollment point • Internet Information Services (IIS)

A corporate security policy states that remote computers are forbidden to communicate directly with servers on the internal network. You need to ensure that you collect inventory data from the remote computers. What should you do?

A. Install Windows Server Update Serves (WSUS) on Server3.

B. Configure the Exchange connector on Server3.
C. Install a management point on Server2.
D. Install a PXE-enabled protected distribution point on Servers.
E. Install a software update point on Server3.
F. Install Network Load Balancing (NLB) on Server6.
G. Install an enrollment proxy point on Server6.
H. Install the Windows Cluster service on Server3.
I. Install a protected distribution point on Server1.
J. Configure IIS to support only HTTPS on Servers.
K. Install a management point on Server5.
L. Install the Windows Cluster service on Server6.
M. Configure IIS to support only HTTP on Servers.
N. Install Network Load Balancing (NLB) on Server3.
O. Install a PXE-enabled protected distribution point on Server4.

Correct Answer: D

QUESTION 46
Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series. Your network contains a System Center 2012 Configuration Manager environment as shown in the exhibit. (Click the Exhibit button.) The network contains six servers. The servers are configured as shown in the following table.

Server name	Server configuration
Server1	• File server • DNS server • Domain controller
Server2	• Microsoft SQL Server • Configuration Managersite database • Microsoft SQL Server Reporting Services (SSRS)
Server3	• Distribution point • Managementpoint • Internet Information Services (IIS) • Configuration Managerprimary site server
Server4	• File server • Microsoft Exchange Server 2010 • Windows Deployment Services (WDS)
Server5	• Internet Information Services (IIS) • Windows Deployment Services (WDS)
Server6	• Enrollment point • Internet Information Services (IIS)

Administrators currently apply software updates to servers manually. You discover that Server4 was never updated. You need to centrally manage software updates for all of the servers by using configuration Manager. What should you do first?

A. Install a management point on Server5.
B. Configure IIS to support only HTTPS on Servers.
C. Install a management point on Server2.
D. Install Network Load Balancing (NLB) on Server3.
E. Install an enrollment proxy point on Server6.
F. Configure IIS to support only HTTP on Server3.
G. Configure the Exchange connector on 5erver3.
H. Install Network Load Balancing (NLB) on 5erver6.
I. Install a PXE-enabled protected distribution point on Servers.
J. Install the Windows Cluster service on Server3.
K. Install a PXE-enabled protected distribution point on Server4
L. Install the Windows Cluster service on Server6.
M. Install Windows Server Update Services (WSUS) on Server3.
N. Install a protected distribution point on Server1.
O. Install a software update point on Server3.

Correct Answer: D
